Summary

Data & AI Engineer | .NET & Azure Specialist with 4+ years of experience designing and developing scalable data-driven and backend solutions using C#, .NET, Python, SQL, and cloud technologies. Experienced in building and optimizing data integration workflows, automation processes, RESTful APIs, microservices, and distributed systems in Azure and AWS environments. Strong background in CI/CD pipelines, cloud architecture, data processing, and integration of multiple data sources.

Hands-on experience developing AI-powered solutions using RAG architectures, embeddings, NLP, and LLM integrations to improve operational efficiency and decision-making. Skilled in designing high-performance applications, implementing authentication and security standards (OAuth 2.0/OpenID Connect), and supporting data-centric solutions with focus on scalability, reliability, and maintainability.

Proficient in Azure DevOps, Git, Docker, PostgreSQL, relational and NoSQL databases, Clean Architecture, SOLID principles, and agile methodologies. Comfortable collaborating with technical and non-technical stakeholders in cross-functional and international environments.

Experience

Software Engineer

Capys IT | Minas Gerais, Brazil (hybrid)

03/2023 – Present

- Designed and implemented a real-time CRM notification microservice using C#, .NET, ASP.NET Core, Clean Architecture, and DDD principles, automating dispatch reports, lead updates, and operational alerts, reducing manual monitoring efforts by approximately 70%. Built with C#/.NET using microservices architecture, clean architecture, and DDD, along with Twilio, Zenvia, System.Net.Mail, and EPPlus.
- Developed AI-powered conversational analysis solutions for WhatsApp interactions using RAG architecture, semantic embeddings, Hugging Face models, and Google Gemini Embeddings, enabling sentiment analysis and contextual response suggestions. Improved customer service efficiency and reduced response handling time by approximately 40%.
- Integrated applications with AWS Cognito to enable SSO authentication, improving security and simplifying user access through centralized identity management. Used OAuth 2.0/OpenID Connect with C#/.NET.
- Implemented and optimized CI/CD pipelines in Azure DevOps using YAML, Git, and automated deployment strategies across staging and production environments. Designed controlled release workflows with approval stages, deployment monitoring, and automated success/failure notifications, reducing deployment time by approximately 60%, minimizing manual intervention, and increasing delivery reliability, governance, and operational stability.
- Integrated credit card payments and financing with Granito and Banco Inter, expanding payment options and improving user convenience and conversion. Built using payment APIs with C#/.NET.
- Led the modernization of a legacy rule-engine service from .NET Framework 4.8 to .NET 8, redesigning critical processing flows, refactoring stored procedures, and optimizing Entity Framework data access and query performance. Reduced execution time from 48 minutes to 17 minutes (~65% improvement), significantly increasing scalability, operational efficiency, database performance, and system reliability.

Junior Software Engineer

Pasi Seguros | Minas Gerais, Brazil (remote)

07/2020 – 12/2022

- Developed automation and monitoring solutions focused on operational efficiency, data processing, and system

integration for internal business areas, using C#, .NET, REST APIs, and automation tools.

- Designed and implemented a legal process tracking application integrated with RJTJ systems, enabling automated data ingestion, monitoring, and centralized process visibility. Reduced manual operational effort and improved tracking reliability for the legal department.
- Processed and integrated structured operational data from multiple systems and APIs, supporting real-time monitoring, reporting, and operational decision-making.
- Built and maintained automation bots and workflow routines to optimize repetitive operational tasks, reducing human error, increasing execution speed, and improving productivity across internal processes.
- Worked with structured data processing, application maintenance, monitoring routines, and operational support, contributing to service reliability and process continuity.

Technologies: C#, .NET Framework, VB.NET, REST APIs, SQL, Automation Tools, Git

Entry-Level Software Engineer

Pasi Seguros | Minas Gerais, Brazil (remote)

01/2020 – 06/2020

- Monitored critical processes to ensure high availability and reliability of services. This enabled faster incident detection and minimized downtime.
- Assisted users with software utilization and environment maintenance, focusing on troubleshooting and issue resolution.

Education

MBA in Artificial Intelligence and Automation – RocketSeat FTR, Brazil (2025 - 2026)

Fullstack Development – Kenzie Academy Brazil, Brazil (2021 - 2023)

BS in Computer Science – FUMEC University, Brazil (2020 - 2022)

Associate Degree in Game Development – FUMEC University, Brazil (2017 - 2019)

Languages

English: Full professional proficiency

Portuguese: Native

Licenses & certifications

[Agents and Automation with N8N](#) – RocketSeat, 2026

[Generative AI and High-Performance Computing](#) – RocketSeat, 2025

[Fullstack Development](#) – Kenzie Academy, 2022

Skills

Data Engineering | Data Reliability | Data Integration | Data Pipelines | Secure Integrations | Operational Monitoring | ETL Processes | Data Processing | Data Transformation | SQL | Python | PostgreSQL | MySQL | Data Modeling | REST APIs | C# | .NET | ASP.NET Core | FastAPI | Microsoft Azure | Azure DevOps | AWS | CI/CD Pipelines | Git | Docker | Distributed Systems | Cloud Architecture | Cloud-Native Applications | Microservices | RabbitMQ | AI Solutions | RAG Architecture | LLM Integrations | Embeddings | Machine Learning Fundamentals | Automation Solutions | OAuth 2.0 | OpenID Connect | MongoDB | Clean Architecture | SOLID Principles | Unit Testing | Agile Methodologies | Scrum | JavaScript | TypeScript | Node.js | React
